ICT Allows People Working From Home: A Literature Review

Alvandi I. Saerang

President University, Indonesia

Abstract

Information Communication and Technology (ICT) is a broad subject and the concepts are evolving. It covers any product that will store, retrieve, manipulate, transmit, or receive information electronically in a digital form such as personal computers, digital television, email, or robots. With the development of technology at this time, people can develop a career in addition to carrying out the role at home. The use of ICT has become a powerful instrumental in facilitating employees to work from home. This has been widely applied in developed countries since the concept of working at home is very closely related to work-life balance. The results of this literature study show that ICT has a relationship with work-from-home practice. Also, several factors can be obtained and become considerations for ICT to be well-implemented when the business decided to carry out the practice of work-from-home..

Keywords: *Information, Communication, Technology, ICT, Work-at-home, Work-life balance*
